QUATREAU™ is the only tap system on the market to use 316 stainless steel throughout its manufacturing processes. Our boilers and boiler elements (electro polished) are highly resistant to corrosion and suitable for all types of potable water including low conductivity and ROWater. Even our filter housings and system casings are 316 stainless providing for long life and recycling value, something often overlooked in today's lifestyle products.

EQUIPMENT DIMENSIONS

System is installed in component form fitting into a standard cabinet (600 x 600 external dims)
Boiler Control Unit and Chiller are supplied as Individual components to make installations easier – see dimensions on drawing page.

SITE PREPARATION DETAILS

1. Cold Water Supply isolated with ½" ball valve
 - A. Mains Cold Water services to rise up at the back of the cupboard and then run at a height of 50cm along the right hand side wall of cupboard to terminate approx. 15cm from front of cupboard.
 - B. Maximum water pressure 60 psi
 - C. Minimum water pressure 45 psi
2. Power x 2 13amp sockets
 - A. Ideally located on the left side of cupboard wall at high level approx. 50cm up from base and 15cm from front
 - B. Ventilation to be cut into the base. Vent kit will be installed running underneath cupboard forward to draw air through kick board
3. Trapped waste upstand located at rear left corner of cupboard behind back board.
 - A. Essential that this doesn't sterilise the footprint of the equipment being installed

See drawings for further information.
